Of all the sciences, ecology asks most directly how humanity understands and participates in life. If the answers have ever been clear, they're certainly not now.

That ambiguity is reflected in "Beyond the Horizon," an exhibition...
or Beautiful? Artists Evaluate Man’s Impact on Nature

awareness of history and of humanity's extraordinary power to shape our environments -- controlling nature, but never quite completely.

As the exhibition is private, people seeking tours should contact Ecoartspace or walk through on the following pages.

PETER EDLUND, 
HILLY-ISLAND-IN-WOLF-COUNTRY (MANHATTAN), 2009

The choice of Manhattan as setting is appropriate for Edlund, whose work addresses "the inherent contradiction between the mythic, utopian image of the great American landscape as exemplified by the Hudson River School, John James Audubon and Ansel Adams," and actual social reality. For Edlund, the landscape is a vehicle for addressing "social amnesia."
GEORGE BOORUJY, GLACIER, 2008

Boorujy is "interested in how we shape, mark and manipulate the landscape," a process made graphically apparent in the rapid melt of glaciers.
SARAH TRIGG,
LAKE VOSTOK WITH TWO OLYMIAS
,2007

Trigg's perception of Earth as "the tissues and organs belonging to an integrated global body" is evident in *Vostok*, with the developed world and pristine Antarctic lake linked in an "age of Google Earth and instant satellite news, one of rapid distribution and consumption of information."

PATRICIA JOHANSON,
An artist who works with ecology itself, Johanson's projects "combine art, ecology, landscaping and functional infrastructure," such as the Fair Park Lagoon in Dallas, Texas. Bat Bridge is part of a series of drawings done for her proposed "Rocky Marciano Trail" in Boston, Massachusetts, which would turn the former boxing champion's training run into a series of natural corridors through what is now a blasted industrial city.

JOY GARNETT,
CHINA YANGTSE THREE GORGES PROJECT (2008–2009) RIVER #7

Garnett describes the world's largest hydropower project,
Her paintings are based on government imagery used to promote the project, transforming their propaganda into "a methodical evisceration of the river valley, rendering the image of the landscape, once immutable, as a fragile substrate to be broken up violently in a triumph of engineering."

**CHINA YANGTSE THREE GORGES PROJECT (2008–2009) RIVER #4**
Drawing from the everyday, anonymous countryside of upstate New York, McCoubrey's paintings "don't fantasize a false idyllic wilderness" but rather one "thoroughly used by human beings, bearing the scars of industry and habitation. They suggest that while humanity's effects on the planet can have devastating consequences, they may eventually be ignored by nature."

**BUILDING LOT, 2008**

![Building Lot, 2008](image)

**MARION WILSON,**
**WHITE SOIL: LANDSCAPES FROM THE SOLVAY WASTEBEDS, SOLVAY, NY**
explores the Solvay Waste Beds outside Syracuse, New York, which Wilson describes as "1400 acres of contaminated, sterile and largely overlooked land." The miniatures depict four seasons of life in the beds, where some plants have managed to grow.

CHARLOTTE SCHULZ,
Schulz describes her work as creating "a purposefully disjointed narrative, fusing historical catastrophes with domestic interiors, postmodern architecture and other-worldly landscapes," which over time "lose their linear, geometric structure and emerge into a synthesis of various landscapes, objects, interiors and weather."

Midst of an Encounter with a Flood, The Unknown Past Carries Itself Into a Current Location and Pressures a Rescue from Geographical Forces, 2010
JASON MIDDLEBROOK, INSPIRED BY THE COUNTLESS TRIPS FROM MY HOUSE TO MY STUDIO, 2008

Middlebrook "examines themes of ecology, entropy and environmental concerns with an emphasis on the tense relationship between man and nature."

EVA STRUBEL, MOLASSES AND ASPHALT TANKS, 2009
In the summer of 2008, Rahmani traveled from the Gulf of Maine to the post-Katrina Gulf of Mexico, documenting the effects of global warming. *Oil and Water*, a series of images "about the untenable paradoxes we live with today," is based on a photograph of Louisiana bayous taken on the trip.
An explorer of the intersection between marketplace and wilderness, Sanditz traveled in 2006 and 2007 to China's single-industry export villages -- Sock City, Shoe City, Oil Painting Village. The resulting paintings "examine how the consumer-based relationship between China and the United States is causing the Chinese landscape to shift from the pastoral to the industrial."

The title *Tower of Babble* is drawn from a billboard advertisement near the Yiwu Commodities Market.
EVE ANDREE LARAMEE, GEOLOGIC MAP OF THE GRAND CANYON #1, 2008

Long interested in the culture of science and the sociopolitical undercurrents of map design, Laramee's works focus on "the environmental and health impacts of Cold War 'atomic age' legacy sites and their effects on human evolution."
